## **Information: Protection against Ebola**

Due to the strong demand, DACH Schutzbeleidung GmbH & Co. KG has developed three different Ebola protection kits based on information from the Robert Koch Institute (RKI), which are tailored to the needs in different situations when dealing with sick people. These situations are (with patient are meant in the following also for disease suspects):

- I. Keeping a minimum distance of 1.20 m from the patient, but entering an area that may be contaminated. Splashing of blood, secretions, or excretions is not expected.
- II. the minimum distance of 1.20 m to the patient is not maintained, but the patient is not treated directly. The protective measures serve to protect against contact and the splashing of blood, secretions or excrement is not to be expected.
- III. direct treatment of the patient is necessary or splashing of blood, secretions or excrements is to be expected.

**We recommend the Chem protection set for situation III. It is the customer's responsibility to check the professional applicability of the products under the given circumstances.**
